

97.000 | Total Seal

TOTAL TOOLS| Cut & Seal

**BEST SELLER!**

## ABOUT

The Total Seal pen is a fast and easy solution to lifting problems with vinyl applications. Total Seal consists of a clear acrylic lacquer containing UV blocking agents, which dries in approximately 10 minutes after application. The Total Seal lacquer is applied with the nib of the pen to the edge of graphics that require protection from lifting, which may be caused by environmental exposure, cleaning or excessive contact. Total Seal is compatible with all types of vinyl graphics.

Finally, this vinyl graphic edge sealer can also be used to fill the dents and correct the surface finish of a car body prior to wrapping.

### Typical applications:

Used to edge seal vinyl lettering and die-cut graphics, in order to protect against lifting due to rain, snow, chemical cleaning agents, high pressure washers,...
